

COIL BOOKS

WHAT ARE COIL BOOKS?

Coil Books, also known as 'Wiro Bound' or 'Lay-flat', are when a block of text pages and covers are bound together along the principal edge with a metal coil.

WHEN ARE COIL BOOKS SUITABLE?

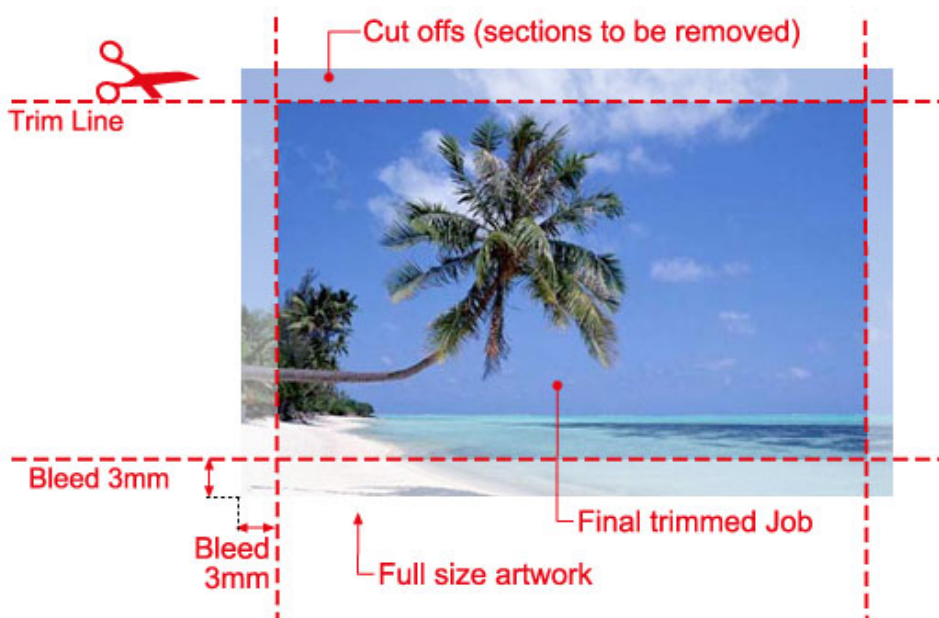

- Minimum sheets per book: 5 (...or 10pp)
- Maximum sheets per book: 300 (If more sheets, contact CLOC for other options)
- Proof: 2 days to turnaround
- Order: 3+ days to turnaround (depending on specification)

SETTING UP COIL BOOK ARTWORK:

TEXT & COVERS: Setting up artwork for Coil Books couldn't be simpler. Please provide all text and cover pages in running order in a single PDF document. Coil Books lay flat so there is no need to worry with regards to important content being lost in the spine when finished. If you require printing to the edge of the sheet, be sure to add at least 3mm of bleed (explained below).

WHAT IS BLEED?

If you require that print runs all the way to the edge of the sheet with absolutely no white borders, you will require artwork with 'bleed'. As is common with desktop printers, commercial printers cannot print to the edge of the sheet. To combat this, we ask that you add at least 3mm of additional background onto each edge of your artwork. That way we can trim it to correct size, cutting through the additional background and ensuring that the print runs all the way to the edge of the sheet.
